

Bite Back

Mosquitoes bite day and night. If you're going outside, **wear repellent.**

“Mosquitoes can carry life-threatening diseases.”

“Please, wear insect repellent day and night.”

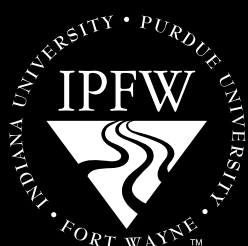

This Fort Wayne couple lost their teenage son to a disease called LaCrosse encephalitis that is spread by mosquitoes.

And they don't want the same thing to happen to anyone else.

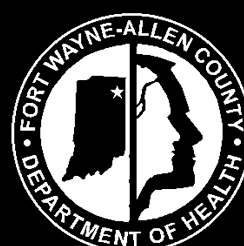

If you are going to be outside, the best prevention is wearing repellent and making sure your children are wearing it as well.

Wearing long sleeves and pants also provides an additional layer of protection.
