

## Updated Traveler Monitoring Process

### Traveler's Returning from Mainland China

- These travelers are all rerouted to one of 11 designated US airports where they are screened for symptoms upon entry.
- Medium-risk travelers are permitted to return to their home where they are asked to practice self-monitoring with public health supervision. The LHD will be notified of their arrival and will establish daily monitoring for fever, cough and shortness of breath. A communication plan will also be established to outline steps that will be taken if symptoms develop
- These travelers are asked to stay home and avoid all congregate settings, including work and school. They are also asked to practice social distancing if they do need to leave their home.

### Travelers Returning from and Area with a level 2 or 3 Travel Alert (S. Korea, Italy, Iran, Japan)

<https://wwwnc.cdc.gov/travel/notices>

- These travelers are provided information at the airport recommending they stay home 14 days from the day they left the area with widespread, ongoing community transmission and practice social distancing.
- They are asked to do the following:
  - Take their temperature with a thermometer twice a day and watch for symptoms of cough and shortness of breath
  - Stay home and avoid contact with others. Do not go to work or school during this 14-day period
  - Do not take public transportation, taxis or ride share during this time
  - Avoid crowded places (shopping centers, movie theaters) and limit public activities
  - Keep their distance from others (about 6ft)
  - Contact their physician's office if they develop symptoms BEFORE they seek care and tell their doctor about their recent travel

### Travel to a Low-Risk Country or Domestic Travel

- There are currently NO recommendations for people returning from other countries or places within the United States with confirmed COVID-19 cases. These travelers are permitted to return home and freely go about their usual routines.

**Have you traveled to an area with a Level 2 or 3  
Travel alert in the last 14 days?**  
<https://wwwnc.cdc.gov/travel/notices>

Yes
